Rather, the game provides players with a single, streamlined dashboard. The goal is extremely uncomplicated: **forecast whether the randomly produced multiplier will be greater or lower than a target multiplier selected by the gamer.**

If the generated outcome fulfills or surpasses the player's selected target, the bet wins. If it fails, the bet is lost.

How Limbo Works: Step-by-Step

Playing Limbo is remarkably simple, making it accessible to novices. Here is how a common round unfolds:

1. **Set the Bet Amount:** The player figures out just how much currency (fiat or cryptocurrency) they wish to bet on the round.
2. **Choose a Target Multiplier:** The player inputs their desired multiplier. This can range from a very safe 1.01 x all the method up to astronomical figures like 1,000,000 x, depending upon the platform's limits.
3. **Check the Win Chance:** As the gamer changes the target multiplier, the game instantly determines the mathematical likelihood of winning. Higher multipliers equivalent lower win opportunities, and vice versa.
4. **Roll/ Spin:** The player clicks the "Bet" or "Roll" button.
5. **The Result:** The game's random number generator (RNG) or provably fair algorithm produces a multiplier. If the result is greater than or equal to the target, the player wins their stake increased by their target.

Example Scenario

Picture a player positions a £ 10 bet and sets their target multiplier to **5.00 x**.

- **If the game produces 6.20 x:** The player wins. They get their initial bet multiplied by 5.00 (£ 50 overall payment).
- **If the game generates 2.15 x:** The gamer loses their £ 10 bet because 2.15 is lower than the 5.00 target.
