Comfort Experts on AC Repair in North Fort Worth When Your System Runs but Does Not Cool An AC that runs but doesn't cool usually has an airflow problem, a dirty coil, a refrigerant issue or a failed part in the outdoor unit. The fan inside may be moving air while the system that removes heat has stopped doing its job. Finding which piece has failed is the key to fixing it. Start outside. Stand by the condenser while the system runs. You should hear the compressor humming and feel warm air blowing up from the top fan. If the fan spins but the air coming off it feels about the same as the outdoor air, the compressor may not be running. If the fan isn't spinning at all, a capacitor or fan motor is a likely cause. If everything runs but the coil is matted with cottonwood or grass clippings, the unit can't shed heat, and the house won't cool on a 100°F afternoon. One quick test is to feel the air at a supply vent after the system has run for 15 minutes. It should feel noticeably cool, roughly 15 to 20 degrees cooler than the air going into the return. If the difference is small, the system isn't removing enough heat, and the cause sits in the refrigerant side, the coils or the compressor rather than the thermostat. Then check inside. A filter packed with dust or pollen can choke airflow so badly that the indoor coil freezes, and a frozen coil can't absorb heat. Look at the copper line at the indoor unit. Frost or ice there points to low airflow or low refrigerant. Make sure the thermostat is set to cool, not just fan on, since a fan running alone blows room-temperature air through the vents.

Comfort Experts | 1949 Golden Heights Rd #200, Fort Worth, TX 76177 | (817) 484-0760

Some causes are safe to handle yourself. Replace the filter, rinse the outdoor coil gently with a hose after shutting off power, and clear plants or debris from around the unit. If ice is present, switch the system off and let it thaw for a few hours before trying again. Other causes need a technician. Low refrigerant means a leak that must be found and repaired, not just topped up. A compressor north Fort Worth AC service that won't start may need a new capacitor, a new contactor or a closer look at the compressor itself. A technician should measure temperatures across the indoor coil, test electrical parts and check refrigerant pressures to pin down the cause. If your AC is running without cooling, Comfort Experts can help any time, 24/7. Call (817) 484-0760, or reach the team on Golden Heights Rd in north Fort Worth, Suite 200.

FAQ About AC Repair North Fort Worth How much does AC repair cost in Fort Worth? The price depends on what's actually wrong, so a capacitor swap and a coil repair won't cost the same. Comfort Experts diagnoses the problem first and explains the options before any work starts. Call (817) 484-0760 to book a visit on the north side of Fort Worth. Is there 24 hour AC repair in north Fort Worth? Yes. Comfort Experts offers 24/7 service from its Golden Heights Rd location near the Alliance corridor. There are no overtime charges, so a dead AC on a 100°F night in Heritage or Park Glen doesn't have to wait until Monday. Why is my AC running but not cooling the house? Common causes include a clogged filter, a dirty outdoor coil, low refrigerant or a failing part in the condenser. In north Fort Worth, cottonwood and cedar pollen often pack filters and coils during spring. If a fresh filter doesn't fix it, it's time for a technician. Should I repair or replace my air conditioner? Age, repair history and the cost of the current fix all matter. Many newer subdivisions in far north Fort Worth have systems reaching their first major repair cycle, and a repair often makes sense there. Comfort Experts handles both AC repair and replacement, so you get a straight answer either way. How long does a typical AC repair take? Many repairs, like replacing a capacitor or contactor, are finished in a single visit. Bigger jobs depend on parts availability and the system's condition. Comfort Experts works 24/7 with no overtime charges, so a repair that runs into the evening won't cost you extra. Why does my AC keep freezing up? Ice on the lines or coil usually points to restricted airflow or a refrigerant problem. A blocked filter or leaky ductwork in a hot Texas attic can both play a part. Switch the system off to let it thaw and call (817) 484-0760. Can hail damage my outdoor AC unit? Yes. Spring hail storms in North Texas can bend condenser fins and damage the outdoor unit, which cuts cooling performance. If your system struggles after a storm in Fossil Creek, Heritage or Park Glen, have it checked before the summer heat arrives. How often should I service my air conditioner? Once a year before the cooling season is a good rule in North Texas, where the AC runs hard for months. Comfort Experts offers AC maintenance and tune-ups that can catch worn parts early. Spring is a smart time to book. What areas does Comfort Experts serve for AC repair? The Golden Heights Rd location sits on the north side of Fort Worth near I-35W and the Alliance corridor, close to neighborhoods like Heritage, Presidio, Park Glen, Summerfields and Timberland. Comfort Experts also has locations in Kennedale, Weatherford and Granbury. Coverage depends on your address, so call (817) 484-0760 to confirm. How long has Comfort Experts been in business? Comfort Experts is a family-run heating and air conditioning company that has served the Fort Worth area since 1962. That's decades of experience with North Texas summers and local homes. Does Comfort Experts

handle more than air conditioning? Yes. Along with AC repair and heating and furnace repair, the company covers duct repair, plumbing, drain cleaning, water heater repair and electrical repair. One call to (817) 484-0760 covers several trades. Can ductwork problems affect my AC? They can. Texas attic heat is hard on ducts and air handlers, and leaks or loose connections waste cooled air before it reaches your rooms. Comfort Experts offers duct repair alongside AC service for homes across north Fort Worth.
