1. The Ascent Phase

Every round begins with the departure. Once the airplane leaves the runway, the multiplier engine activates. Gamers watch as the numerical value ticks up, starting from 1.00 x and climbing upwards depending upon the period of the flight.

2. Fuel Management and Obstacles

Unlike endless vertical scrollers where movement is infinite, Avia Masters presents practical or semi-realistic constraints. Airplane are bound by fuel capacity, and different in-flight modifiers-- such as tailwinds, headwinds, and altitude markers-- can change the trajectory and effectiveness of the flight.

3. The Cash-Out Dynamic

The defining feature of the experience is the exit technique. Individuals need to by hand collect their development before the flight terminates. If the flight ends too soon due to an in-game risk before a collection is made, the session leads to a no return.

Game Phase Description Participant Action **Pre-Flight** Establishing criteria and viewing previous flight data. Change settings and prepare for launch. **Ascent** The airplane removes; multipliers start to increase. Monitor the flight path and multiplier development. **Travelling/ Mid-Game** Weather condition occasions or speed increases might happen. Evaluate threat vs. reward in real-time. **Termination/ Cash-Out** The flight concludes either by choice or risk. Perform the collection command before catastrophe strikes.

  - *Advantage:* Yields greater consistency, though specific wins are smaller.
- **The High-Altitude Chase (Risk-Tolerance):**
  - *Concept:* Allowing the flight to continue into higher multiplier brackets, accepting that lots of runs will lead to an overall loss for the sake of capturing an enormous multiplier.
