Each slot is designated a specific multiplier, which identifies the player's payout.

Unlike conventional gambling establishment games like Blackjack or Poker, Plinko needs no ability or complex technique to play. It is a game of "provably fair" mechanics, where the result is determined by a random number generator (RNG) at the moment the ball is dropped.

  - **High Risk:** The multiplier at the edges can be massive (often reaching 1000x), however the majority of the center slots will result in a loss.
- 2. Number of Rows:** This dictates the size of the pyramid. A board with 8 rows provides a various mathematical spread than one with 16 rows. Increasing the number of rows normally increases the maximum prospective multiplier.

3. **The "Big Fish" Hunt:** Players set the game to "High Risk" and "16 Rows," aiming particularly for the 1000x multiplier. This method needs a big bankroll, as many balls will land in losing slots before a considerable win takes place.
