3. **The Trigger Event:** The jackpot can be set off randomly, through a specific bonus minigame, or by landing a rare mix of symbols. The random number generator (RNG) or a qualified server-side trigger determines the winner.
4. **Confirmation and Payout:** Once the win is protected, the aggregator validates the transaction. Because these swimming pools are often handled by significant software giants (like Microgaming, NetEnt, or Playtech), the payment is typically ensured by the network provider instead of relying entirely on the individual casino's everyday money circulation.

Types of Jackpot Aggregators
