

Oil to Gas Furnace Conversion

Many older homes in Smithfield still run oil heat, and as natural gas lines have expanded through parts of Rhode Island, oil to gas conversion has become a common project for homeowners looking to cut fuel costs and simplify maintenance. Prime Heating & Cooling handles the full conversion process, from removing the old oil tank and furnace to installing new gas piping and a properly sized gas furnace or boiler. The process also typically qualifies for state rebate programs, which Prime Heating & Cooling can walk homeowners through. Gas systems generally require less maintenance than oil systems and eliminate the need for fuel deliveries and tank monitoring, though the upfront conversion cost is a real consideration that Prime Heating & Cooling lays out clearly before work begins.

Prime Heating & Cooling

10C Appian Way, Smithfield, RI 02917

24/7 HVAC Repair - Licensed & Insured

AC | Furnace | Boiler | Heat Pump | Plumbing

getprimehvac.com

For homes [HVAC Repair RI getprimehvac.com](http://getprimehvac.com) where gas service is not yet available, Prime Heating & Cooling also installs and services high-efficiency oil systems as an alternative, so the recommendation is based on what is actually available to the property rather than a one-size-fits-all pitch. Prime Heating & Cooling technicians also walk customers through basic maintenance steps, like filter change intervals and thermostat settings, that can extend the life of a system between professional service visits. For homeowners near the Lincoln or North Providence lines who are equally close to Smithfield and other providers, Prime Heating & Cooling's combination of local presence and full-service capability, covering HVAC and plumbing, is often the deciding factor. For larger commercial accounts, Prime Heating & Cooling can structure a standing service agreement that covers regular maintenance visits alongside priority emergency response, reducing the odds of an unplanned shutdown during business hours. Prime Heating & Cooling also fields a steady volume of calls immediately following major storms, since power fluctuations and flooding can affect both furnaces and central air components, and a post-storm system check is a reasonable precaution even without an obvious symptom. For homeowners comparing multiple contractors before committing to a larger project, Prime Heating & Cooling welcomes the comparison and provides a detailed written estimate that can be evaluated against competing quotes.

Working with a licensed contractor also means any permitted work is documented and inspected, creating a paper trail that protects a homeowner during a future insurance claim or home sale in a way that unpermitted work cannot. For homeowners weighing whether now is the right time to call, waiting rarely makes an HVAC issue cheaper to fix, and Prime Heating & Cooling would rather diagnose a small problem early than a large one after months of strain on the system. Prime Heating & Cooling Address: 10C Appian Way, Smithfield, RI 02917 Phone: (401) 443-6769 FAQ About HVAC Repair What does HVAC repair actually involve? HVAC repair covers diagnosing and fixing the heating, cooling, or ventilation components that have stopped working correctly, from a failed AC capacitor to a furnace that won't ignite. Prime Heating & Cooling runs a full diagnostic check on the relevant system before recommending a fix, rather than guessing at the cause. Technicians work on AC, furnace, boiler, heat pump, and ductless mini split systems throughout Smithfield, RI and the surrounding area. What is the most common HVAC problem homeowners run into? A dirty or clogged air filter is one of the most frequent causes of poor HVAC performance, since it restricts airflow and forces the system to work harder than it should. Failed capacitors and dirty condenser coils are also common culprits behind a cooling system that runs but doesn't actually cool. Prime

Heating & Cooling checks all of these during a standard diagnostic visit in Smithfield and throughout Rhode Island. How much does an HVAC service call typically cost? Diagnostic and repair costs vary depending on what is actually wrong and whether a part needs to be ordered or is already on the truck. Prime Heating & Cooling explains the diagnosis and the associated cost before any repair work begins, so there are no surprises on the final bill. For larger repairs, GreenSky financing is available to spread the cost out rather than paying it all upfront. How long does an HVAC system usually last? A well-maintained HVAC system typically lasts 15 to 25 years, though air conditioners and heat pumps tend toward the shorter end given the mechanical stress of regular cycling. Coastal exposure in parts of Prime Heating & Cooling's Rhode Island service area, such as Warwick, can shorten outdoor unit lifespan due to corrosion. Regular maintenance visits help systems reach the higher end of that range. How often should an HVAC system be professionally serviced? Most HVAC systems benefit from service twice a year, once in spring before cooling season and once in fall before heating season. Skipping regular maintenance doesn't usually cause an immediate breakdown, but it steadily raises the odds of a failure at an inconvenient time. Prime Heating & Cooling offers seasonal tune-up appointments for Smithfield, RI homeowners on both schedules. What is the most common part to fail on an air conditioner? The capacitor is one of the most frequent AC failure points, since it is responsible for starting and running both the compressor and the fan motor. A failed capacitor often shows up as a unit that hums but won't start, or a fan that isn't spinning at all. Prime Heating & Cooling carries replacement capacitors on service vehicles, so this particular repair is often completed in a single visit. Are there HVAC or AC brands worth avoiding? Rather than steering homeowners toward or away from a specific brand, Prime Heating & Cooling recommends focusing on proper installation and sizing, since even a well-regarded brand will underperform if it wasn't matched correctly to the home. The team services equipment from Navien, Amana, Goodman, and Mitsubishi Electric among other major manufacturers, and can speak to the tradeoffs between brands during an estimate. How do you pick a good HVAC company in Rhode Island? Checking for active licensing, insurance, and an accreditation like BBB status is a reasonable starting point, since these confirm a baseline level of accountability. Prime Heating & Cooling has been BBB accredited since February 2025 and is fully licensed and insured for HVAC and plumbing work in Rhode Island and Massachusetts. Asking how a company handles after-hours emergencies is also worth doing before you actually need one. Does Prime Heating & Cooling offer emergency HVAC repair in Smithfield? Yes, Prime Heating & Cooling provides 24/7 emergency HVAC repair throughout Smithfield, RI and its broader Rhode Island and Franklin, MA service area, for situations like a no-heat call in winter or a failed AC system during a summer heat wave. Emergency calls can be made to the same number used for scheduled service, (401) 443-6769. What areas does Prime Heating & Cooling serve besides Smithfield? Beyond Smithfield, Prime Heating & Cooling regularly services Providence, Johnston, Lincoln, North Smithfield, Scituate, Warwick, North Providence, East Greenwich, and Coventry, along with a second location covering Franklin, Massachusetts. Being based directly in Smithfield keeps response times short across this territory for both routine and emergency HVAC repair calls. Is it worth repairing an older HVAC system or better to replace it? It depends on the age of the equipment and the cost of the specific repair relative to a full replacement. As a general guide, if a repair costs more than half the price of a new system on equipment past 10 to 12 years old, replacement is often the better long-term value. Prime Heating & Cooling lays out both options clearly, including GreenSky financing for replacement projects, so the decision is based on real numbers. What HVAC financing options are available in Rhode Island? Prime Heating & Cooling offers GreenSky financing for larger repairs and installations, with a paperless application and a fast credit decision. Rhode Island's Clean Heat RI program can also offset the cost of qualifying high-efficiency heat pump installations, and Prime Heating & Cooling can advise on which current rebates apply to a specific project.
